EXECUTIVE SUMMARY

The Academic Program Review process includes a survey of alumni one-, three- and five-years out. This survey includes items pertaining to alumni satisfaction with their education. Included in the most recent administration of this survey were items pertaining to alumni affinity towards DePaul University. This survey found:

- High levels of satisfaction with DePaul University and moderate levels of affinity.
- Law graduates had significantly lower mean levels of satisfaction and affinity than either graduate or undergraduate degree recipients. In terms of the identity and pride measures, graduate students also had significantly lower mean scores than undergraduates.
- Students three and five years out were more satisfied with their overall DePaul education than more recent graduates. They were more inclined to say they would choose DePaul again if given the opportunity to start their program over.
- Those who pursued more than one degree at DePaul had significantly higher rates of satisfaction and affinity than those who only took one degree at DePaul.
- Undergraduate degree recipients who came to DePaul as transfer students had similar levels of satisfaction and affinity as those students who started as native freshmen.
- African-American and Latino students had higher levels of affinity with the institution.
Highlights from the APR Alumni Survey on Affinity

Surveys of current and graduating students continue to show high levels of satisfaction with experiences at DePaul. The Princeton Review has twice recognized DePaul as having the “happiest” students in the United States. This raises the question: Are these good feelings about the university that are cultivated while students are enrolled sustained over time? The Office of Institutional Planning and Research (OIPR) recently attempted to answer this question. Alumni one-, three- and five-years out are routinely surveyed as part of the Academic Program Review process, and the administration of the survey was expanded to include all alumni, not just those from programs undergoing review, in the hopes of collecting more baseline data for use in future program review cycles. OIPR added some items related to affinity to the second administration of the survey (note that the affinity items did not appear on the original survey sent to CDM and math/science graduates). These affinity items were culled from previous surveys of alumni that have been administered at DePaul. Overall, 1,623 alumni responded to the survey, approximately 15% of the population surveyed.

The survey contained six items related to alumni satisfaction with DePaul and alumni affinity. The two satisfaction items, answered on a 4-point scale (1=very dissatisfied to 4=very satisfied) were:
- Overall, how satisfied were you with your education in your program of study?
- Overall, how satisfied were you with your education at DePaul?

The four affinity items were:
- To what extent do you identify with DePaul University? (1=not at all to 5=very strongly)
- To what extent are you proud to be a DePaul University alum? (1=not at all to 5=very strongly)
- Would you encourage others interested in your program to attend DePaul? (1=definitely no to 5=definitely yes)
- If you had the opportunity to start your program again, would you choose DePaul? (1=definitely no to 5=definitely yes)

First, the correlations among the six items were investigated:

</table>
Note: Correlations represent the linear relationship between two variables and can range from -1 to +1. The closer the absolute value of the coefficient gets to 1, the stronger the linear relationship. The positive nature of the correlations in this table indicates a direct relationship, meaning high scores on one question are associated with high scores on the other question.

The correlations within the affinity items (red cells) and the satisfaction items (blue cells) were quite strong. The correlations between the affinity items and satisfaction items (purple cells), while still statistically significant, were typically not as strong as those seen in the other cells.

Next, the percentages for each of the items for all alumni were investigated.

So basically, we see

- 92% of respondents saying they are satisfied with their education within their program of study and at DePaul as a whole
- 76% say they would encourage others to attend DePaul and 64% would say they would choose DePaul again for their program of study (% probably/definitely yes).
- 65% say they are proud to be a DePaul alum (% strongly or very strongly), but 46% of respondents say they identify with DePaul.

On its face, it would appear that DePaul alumni, at least those that responded to the survey, were satisfied with their experiences at DePaul and they maintain at least a moderate level of affinity with the University. As we dig deeper into the data, though, some interesting patterns start to emerge.
Satisfaction and Affinity by Degree Level
First, the data were looked at by level (undergraduate, graduate or professional, using the most recent degree obtained from DePaul from those who received multiple degrees).

It would appear that there were no significant differences across the levels in terms of satisfaction. However, because of the considerably higher percentage of Law students who said “satisfied” rather than “very satisfied” relative to the other two levels, Law graduates had significantly lower mean levels of satisfaction and affinity (means and percentages have been appended) than either graduate or undergraduate degree recipients. In terms of the identity and pride measures, graduate students also had significantly lower mean scores than undergraduates.

Satisfaction and Affinity by Degree Date
We surveyed alumni one, three and five years out and when the data were analyzed by years removed from DePaul, we found no highly significant (p<.001) differences across the groups, though there were some moderately significant differences.

- Students one year out were slightly less satisfied in their overall DePaul education than those three or five years out (p<.005).
- Students one year out were slightly less inclined to say they would choose DePaul again if given the opportunity to start their program over (p<.005).
Satisfaction and Affinity by College and Level
Analyses by college and level, only considering UG and Grad Commerce, Communication, Education and LAS, yielded the following results:

- There were no differences by college and level found for the satisfaction items.
- For the identity item, undergraduates had slightly higher scores, on average, than graduate students (p<.05) and this pattern was consistent across college.
- For the pride item, again undergraduates had slightly higher scores than undergraduates, but this difference was more pronounced for Commerce, Communication and Education than LAS.
- For the final two affinity items, there were no significant differences found by college or by level within college.

Overall, these findings suggest that satisfaction and affinity does not differ across the colleges considered (note, though, that Law was not included here, but that we saw large differences between
UG, grad and law students in the section on student level). The mean differences found previously between UG and grad students on the identity and pride affinity items were basically consistent across college.

**Satisfaction and Affinity for Multiple Degree Earners**

Not surprisingly, those who pursued more than one degree at DePaul had significantly higher rates of satisfaction and affinity than those who only took one degree at DePaul. This does not count double majors as receiving two degrees.

**Satisfaction and Affinity by Entry Status**

Undergraduate degree recipients were further studied in terms of whether they matriculated as native freshmen or transfer students (SNL was excluded from these analyses). The analyses showed very little difference between those who came as freshmen versus as transfer students in terms of satisfaction or affinity.
Satisfaction and Affinity by Race
Analyses by race revealed:

- There were no significant differences in satisfaction with programs by race.
- African-American and Latino students tended to identify more strongly with DePaul and were more proud to be alumni than white or Asian students.
- There were no differences by race when considering encouraging others to attend DePaul. Asian students were less likely to say they would consider DePaul if given the opportunity to start their studies again.
**Satisfaction and Affinity by Gender**
Analyses by gender revealed no significant differences in ratings of satisfaction or affinity by gender.
