Creating a Sample from a Panel

Many times, an uploaded panel may serve as a population from which you draw multiple samples for different projects. Obviously to do this, you must have access to the Panels feature. If you do not see the Panels tab when you log in, please contact Joe Filkins.

Generating a sample

1. Go to the Panels tab, click the Samples button and click the green Create New Sample button at the far right.

2. In the dialog box that appears, be sure the panel you want to draw the sample from is in the green box in the upper right hand corner of this dialog box. Name your sample and specify the sample size.
3. You can specify any conditions on your sample by clicking the Add a Sample Condition link within the dialog box. In this case, I only want to sample Graduate Business students. You can specify multiple conditions with normal Boolean logic. Click the plus sign at the far right (circled) to add another condition.

4. Click Generate Sample and your sample will be drawn

Note that you can exclude panel members from your sample who have already been chosen for another sample. To do that, rather than choosing Embedded Data, choose Respondent Sample Membership and follow the logic to exclude those from other samples.
